

# Goods with which we are going to provide you to practice COVID-19 countermeasures

## ◆Original face covering (mask)

Masks are indispensable for achieving safe and secure Olympic and Paralympic Games Tokyo 2020. ASICS Corporation, a gold partner of the Tokyo 2020 Games, will provide two original face covers (masks) for each Field Cast (Games Volunteers).

The mask has a three-layer structure and uses a filter with a 99% particulate filtration efficiency (PFE). In addition to its original function of decreasing droplets, it also has antimicrobial and deodorant functions, and is made of quick-drying material, which is suitable for summer activities, as well as it contains a comfortable cool material in the fiber. Besides, it also has a three-dimensional structure that allows for easy breathing. Allowing Field Cast (volunteers for Tokyo 2020) to feel comfortable during the activities while preventing the novel coronavirus infection is the goal to use the mask. Lastly, the mask is made of recycled materials and can be washed and used repeatedly.

\*Test result: 99% at default state, 94% after washed 20 times (the test result from KAKEN TEST CENTER General Incorporated Foundation, test name ASTM F 2299).

## ◆Portable hand sanitizer

Alcohol disinfectant will be available at the venue where you will be participating. However, since it is expected that there may be situations where alcohol disinfectant is not available nearby when you need to disinfect your hands during volunteer activities. Therefore, we will provide you with a portable hand sanitizer. These will be prepared by the Nippon Foundation Volunteer Support Center.

## ◆Condition Management Guideline

We will provide Field Cast with a Health Management notebook so that you can effectively manage your daily physical condition by yourself. 14 days prior to the start of your activity, you can start to write down your body temperature and other information in this notebook. During the period of your volunteering activity, you can also check and manage your physical condition when you woke up, before, in the middle of, and after your volunteering activity.
