

1. Cases needing deliberation

- (1) Cases where athletes and support staff need to travel directly from their arrival airport to the Olympic and Paralympic Village
 - (2) Cases where athletes and support staff need to travel from their arrival airport via a Host Town or other location to the Olympic and Paralympic Village
 - (3) Cases where athletes and support staff need to travel from the Olympic/Paralympic Village to competition and training venues during the Games
- Rules similar to those for (1) or (2) will apply to post-Games athlete transport depending on the routes taken.*

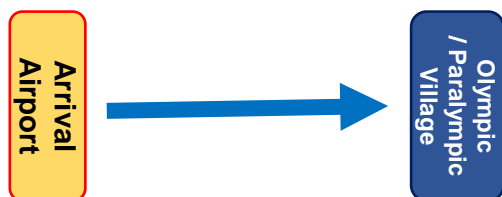

2. Planned measures (Draft)

In all of the above 3 cases, can we discuss and study the approach for athletes using the framework as below?
Detailed review of this will be required in conjunction with the IOC, the IPC, NOC/NPCs, IFs, etc.

Common to all cases

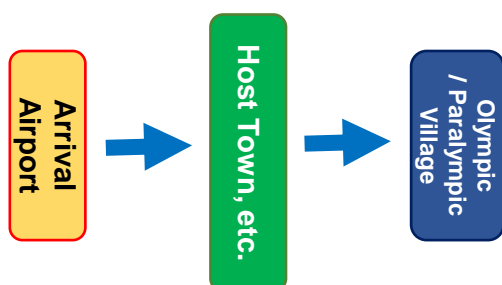

- We will register all domestic travel routes, including those to/from Host Towns and pre-Games training camp sites.
- We will work out in detail the domestic travel routes of athletes from arrival to departure based on registered travel route information.
- In principle, athletes and support staff will be transported by dedicated vehicles between the Olympic/Paralympic Village and competition and training venues. However, public transport (airplane, bullet train, etc.) will be used in a limited manner if its use is unavoidable.
- We will consider all necessary infection control measures concerning the transport of athletes, etc. based on the measures implemented during the arrival and departure of athletes and support staff at the Games, as well as on industry-specific guidelines.
- We will devise specific infection control measures to be adopted during the transportation of athletes and support staff in Japan in order to ensure a safe and secure Games delivery – for example:
 - Transfer between the airport and Olympic and Paralympic Village when entering and leaving Japan
 - Transportation between the Olympic and Paralympic Village and competition and training venues
 - Transportation between the Olympic and Paralympic Village and the International Broadcast Centre (IBC) / Main Press Centre (MPC)
 - Transportation between cities
 - Transportation by self-arranged vehicles
 - Handling of luggage

(1) Cases where athletes and support staff need to travel directly from their arrival airport to the Olympic and Paralympic Village

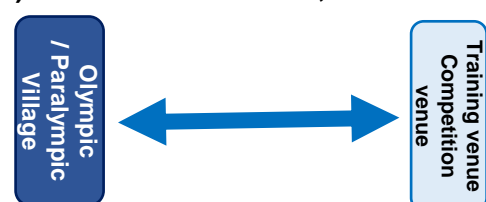

- In principle, athletes and support staff who need to travel directly from their arrival airport to the Olympic and Paralympic Village will be transported by dedicated vehicles procured by the Organising Committee.

(2) Cases where athletes and support staff need to travel from their arrival airport via a Host Town or similar to the Olympic and Paralympic Village

- Athletes and support staff who will travel from their arrival airport to the Olympic and Paralympic Village via a Host Town (e.g. to participate in pre-Games Host Town friendship programs or training camps, etc.) will in principle be transported by dedicated vehicles procured by Host Towns. However, public transport (airplane, bullet train, etc.) will be used in a limited manner if its use is unavoidable.
- Local municipalities welcoming athletes and support staff will devise specific infection control measures to be adopted during their transportation to Host Towns and include these in their Reception Manual.
- We will consider measures to ensure compliance with these transportation rules

(3) Cases where athletes, etc. need to travel from the Olympic and Paralympic Village to competition and training venues during the Games

- When travelling between the Olympic and Paralympic Village and training and competitions venues, athletes and support staff will in principle be transported by dedicated vehicles procured by the Organising Committee. However, public transport (airplane, bullet train, etc.) will be used in a limited manner if its use is unavoidable.
